

Mobile High Definition – MVP Production Trailer

Mobile Video Producer

This turn-key system is a viable option for houses of worship that conduct many field events or for those that simply cannot change the architecture to accommodate a production studio.

Outfitted with Sony switchers, cameras, monitors and decks, as well as third-party primary and secondary audio mixers, intercom and tally systems, character generator and support gear – this is high definition without high cost. Pulled by any vehicle with class 3 hitching equipment, the 29-foot trailer does not require a dedicated cab or tractor.

Sample MVP incorporates Sony HD equipment (other configurations are available)
